FS200 How to: Apply unique ticket numbers

Feature overview

Makeready of long, complex jobs requires the ability to apply different page number sequences or formats to the multiple sections in a document. The expanded page numbering tool in Fiery® JobMaster includes advanced capabilities to cater to these demands.

Advanced Page Numbering allows operators to create unique numbering sequences for one or multiple sections, using a combination of custom texts, formats and macros.

Advanced Page Numbering offers ease of use and flexibility to meet various document numbering requirements in long documents.

Objectives

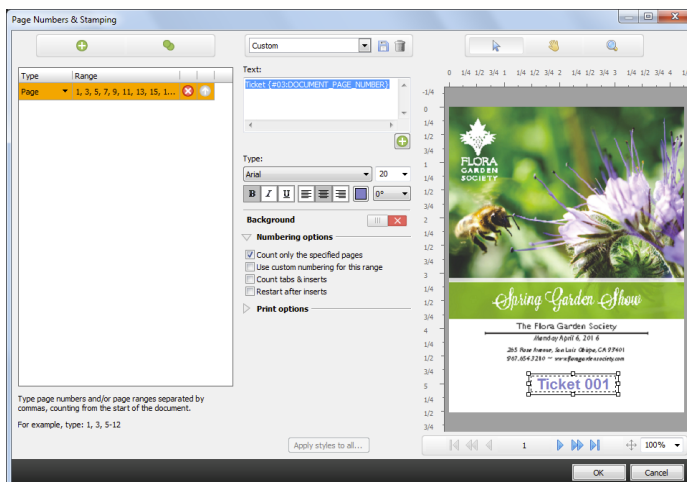

- Insert incremental ticket numbering
- Create N-up layout with Fiery Impose

Additional resources

For additional software downloads, training resources and more, go to [Fiery Online Resources](#).

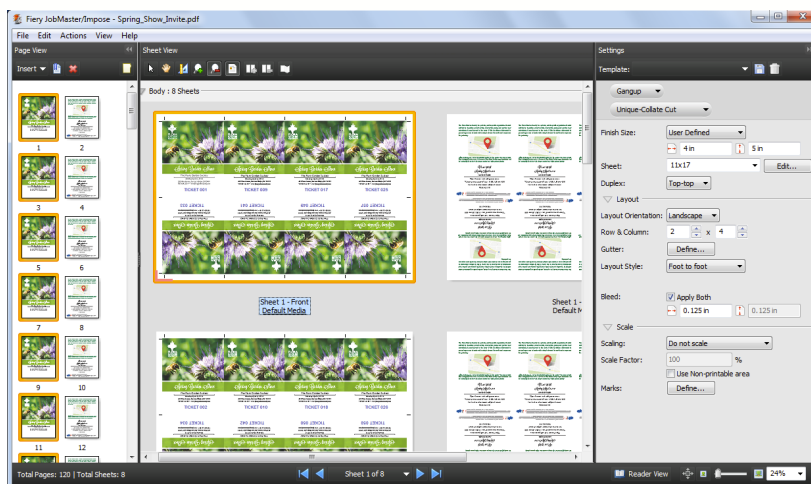

Before you begin

- Open Fiery Command WorkStation® 5.7 or later and connected to at least one Fiery Driven™ printer that supports Fiery JobMaster.
 - For the updated list of supported printers go to: <http://w3.efi.com/Fiery/Products/Workflow-Suite/Fiery-JobMaster/Specifications>
- Activate the Fiery JobMaster and Fiery Impose licenses on the computer running Command WorkStation.
- Place the sample file, **Spring_Show_Invite.pdf**, in the Fiery server Hold queue. Drag the file to the Command WorkStation Held list or use the Command WorkStation Import menu option.
- Ensure the printer and Fiery server have been calibrated before printing any output.

Insert incremental ticket numbering

1. Select the **Spring_Show_Invite.pdf** file in the Command WorkStation Held list. Then right-click to select **JobMaster**. Or click the **JobMaster** icon in the toolbar if it has already been added.
2. Select all the **Odd** pages in the Page View pane. Right-click on **Page 1** and select **Select Odd Pages**.
3. Right-click and select **Edit Numbering** or click **Actions > Edit Numbering**.
4. The Page Numbers & Stamping window will open.
5. Click the **Add Range**  icon to create a new page range.
6. Leave the range Type as **Page**.
7. In the **Text** field, position the cursor in front of the default text, **{#DOCUMENT_PAGE_NUMBER}**.
 - a. Enter the text to insert before the number. For this example, type **TICKET**.
 - b. Move the cursor after the pound symbol, and enter the numbers to precede each ticket number. For this example, enter **03**: This will insert two zeros in front of the first ticket number. In this example, the first ticket is numbered 001.
 - c. The Text field should now display **TICKET {#03:DOCUMENT_PAGE_NUMBER}**.
8. By default, the page number will be placed in the lower right corner. Use the **Select** icon to move the text box and increase the field size so all the inserted number text is visible. Move to the center-bottom location on the page.
9. In the Type area, change the font, size, color and alignment. For this example, select **Arial**, **Bold**, size **20** and **center align**.
10. In the Numbering options area, select the **Count only the specified pages** check box.
11. Navigate using the double arrows to scroll through several pages and check to see that the number increments are accurate.
12. Click the **disk** icon to name and save these settings as a preset for future jobs. For this example, type **Ticket Numbering** and click **OK**.
13. Click **OK** when done to close Page Numbers and Stamping.
14. In the next section, you will use Fiery Imposition to create an N-up imposition template.

Create N-up layout with Fiery Impose

1. In the Settings pane, change the product intent from Compose to **Gangup** and then select **Unique-Collate cut**.
2. For Finish Size, select **User Defined**.
3. For Sheet, select **11x17** or **A3**.
4. For Duplex, to **Top-top**.
5. In the Layout area, set the following options:
 - a. Layout Orientation: **Landscape**
 - b. Row & Column: **2 x 4**
 - c. Layout Style: **Foot to foot**
6. In the Scale area, set the following options:
 - a. Marks: Click **Define** and select the **Print trim marks** and **Print mark on front surface only** checkboxes. Click **OK** to close the Marks window.
7. Click the **disk icon** to save and name this template for future use. Then click **OK** to close.
8. Save and name the job. Click **Save as a regular imposed job**. Then click **OK** when done.
9. Click **File > Exit** or click the red **X** located in the upper right corner to close Fiery Impose.
10. The tickets are ready for printing.

EFI fuels success.

From Fiery to super wide inkjet, from the lowest cost per label to the most automated business processes, EFI has everything your company needs to succeed. Visit www.efi.com or call 650-357-3500 for more information.
